GLOBAL HEALTH SPECIAL SEMINAR

THE STORY OF MILK: STRATEGIES AND POLICY IMPLICATIONS FOR ENSURING SAFE MILK PRODUCTION IN ETHIOPIA

with Mestawet Taye, Ph.D., director of the School of Animal and Range Sciences at Hawassa University in Ethiopia, Global Health Institute visiting scholar

Drinking milk should lead to improved nutritional status, but if milk is of poor quality or isn't handled the right way, it can cause more harm than good. While water in Ethiopia is regulated, milk isn't — which is what Taye is looking to address. By engaging with Wisconsin community partners, Taye is looking to collect and share recommendations to inform Ethiopia-specific milk quality standards to ensure safe milk production, processing and consumption.
